

## Traditional systems - Angle standing seam (vertical design)

## ASS V 7.2.01 Vertical window section - non-vented sill.

All dimensions are indicative unless specified on the drawing Sheet thickness may be exaggerated for clarity

### Scale 1/5

# Notes:

- Used for narrow windows where ventilation can flow around window. For wide windows with a vented sill, see ASS V 7.1.01. y ASS V 7.1.02.
- The elevation corresponds to windows lined up with vertical joints.
- For horizontal section see ASS V 7.2.02.
- 'A' with sheet cladding, 'B' with long strip cladding. It is recommended to overlap the cladding with the sill by a minimum of 60mm.
- Generic structural details are given for indicative purposes only.
- Window sections reproduced courtesy of Technal.

- 1. elZinc® cladding
- Membrane
- Structural underlay
- 4. Folded galvanised steel profiles

elZinc®

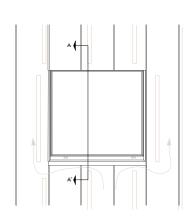

- 5. elZinc® perforated sheet
- 6. elZinc® retention profile
- 7. Insulation
- Wooden batten 8.
- 9. Wall bracket
- 10. Substrate
